[Help](#) on the options is available.

**No DOCTYPE found! Attempting validation with HTML 4.01 Transitional.**

The DOCTYPE Declaration was not recognized or is missing. This probably means that the Formal Public Identifier contains a spelling error, or that the Declaration is not using correct syntax. Validation has been performed using a default "fallback" Document Type Definition that closely resembles "HTML 4.01 Transitional", but the document will not be Valid until you have corrected this problem with the DOCTYPE Declaration.

Learn [how to add a doctype to your document](#) from our [FAQ](#).

## This page is **not** Valid (no Doctype found)!

Below are the results of attempting to parse this document with an SGML parser.

1. Error *Line 1 column 0: no document type declaration; implying "<!*

**DOCTYPE HTML SYSTEM>".**

```
<html>  
....
```

The checked page did not contain a document type ("DOCTYPE") declaration. The Validator has tried to validate with a fallback DTD, but this is quite likely to be incorrect and will generate a large number of incorrect error messages. It is highly recommended that you insert the proper DOCTYPE declaration in your document -- instructions for doing this are given above -- and it is necessary to have this declaration before the page can be declared to be valid.
